

WASHREWARDS SA

AWS Activate — MVP Funding Request

Submitted via Disraptor | AWS Activate Provider

Prepared for	Customer	AWS Activate Provider	Build Partner	Version
AWS Activate Team	Convenient Living Solutions t/a WashRewards SA	Disraptor	Sethala	v2.0 — MVP Aligned

WashRewards SA requests AWS Activate credits through Disraptor to fund the MVP build and first six months of cloud consumption for a new AWS-native South African vehicle wash marketplace.

1. Executive Summary

WashRewards SA is a South African vehicle-care marketplace that connects customers with registered car wash partners across Johannesburg and Gauteng. The platform provides location-based discovery, slot booking, in-app payment, digital receipts, partner settlement, verified ratings, and a loyalty engine that auto-issues a R100 voucher after every fifth qualifying wash.

The MVP scope covers a React Native customer app (iOS & Android), a web-based partner portal, an admin console, and core platform engines for bookings, payments, settlement, loyalty, vouchers, reviews, and QR attribution — deployed entirely on AWS in a WashRewards-owned account.

Disraptor, as the AWS Activate Provider, will support the funding application, architecture validation, and AWS account governance. Sethala is the application build partner.

Recommended AWS decision: Approve an AWS Activate credits package to offset MVP cloud consumption for the first six months, enabling a production-ready Johannesburg launch by Month 6.

2. Delivery Model

Party	Role	Responsibility
WashRewards SA	Customer / Workload Owner	Business concept, AWS account ownership, partner recruitment, product decisions, and go-live acceptance.
Disraptor	AWS Activate Provider	Lead Activate credits application, architecture validation, AWS account governance, cost modelling, Well-Architected guidance, and proof-of-performance support.
Sethala	Application Build Partner	Design, build, and launch the customer app, partner portal, admin console, and platform engines per the agreed SOW.

AWS	Cloud Platform & Credits Provider	Provide AWS Activate credits, technical guidance, and a path to production-scale AWS consumption.
-----	-----------------------------------	---

3. MVP Scope

The MVP is intentionally constrained to validate the core booking-to-payment-to-loyalty loop with real partners and customers before scaling.

MVP Component	Description
Customer App (iOS & Android)	Registration, vehicle profile, location-based car wash search, slot booking, in-app payment, digital receipt, loyalty wallet, and voucher redemption.
Partner Portal (Web)	Partner onboarding, service/pricing configuration, operating hours, booking management, QR attribution setup, and earnings dashboard.
Admin Console (Web)	User management, partner approvals, transaction monitoring, loyalty ledger, voucher controls, and platform analytics.
Core Platform Engines	Bookings, payments, partner settlement, loyalty accrual, voucher issuance (R100 after 5th wash), verified ratings, QR attribution, and notifications.
AWS Infrastructure	ECS/Fargate API, RDS PostgreSQL, S3, CloudFront, Cognito, SQS/EventBridge, ElastiCache, SES/SNS, CloudWatch, WAF, KMS, CodePipeline.

4. Why AWS Activate

WashRewards SA qualifies for AWS Activate as an early-stage startup building a net-new, cloud-native workload with no prior AWS production footprint.

- AWS is the target production platform from day one — not a migration from another cloud.
- The workload will run in a WashRewards-owned AWS account, making consumption directly measurable.
- The use case is a real commercial marketplace with payments, partner settlement, loyalty liabilities, and QR-based customer acquisition.
- The platform naturally consumes a broad AWS service footprint: compute, managed database, storage, CDN, identity, messaging, notifications, observability, security, CI/CD, and backup.
- Clear scaling path: Johannesburg pilot → Gauteng expansion → national rollout. Every partner, booking, payment, and voucher increases AWS consumption.
- The platform digitises South African SME car wash operators that currently lack booking, payment, loyalty, and reporting technology.
- Disruptor can package the Activate evidence, usage reporting, and Well-Architected outputs required for AWS review.

5. MVP Success Criteria

Area	Acceptance Criteria
------	---------------------

AWS Foundation	WashRewards AWS account configured with dev/staging/production environments, IAM baseline, budgets, tagging, monitoring, and security controls.
Customer MVP	App supports registration, vehicle profile, location search, booking, payment, digital receipt, and loyalty wallet.
Partner Onboarding	Minimum 20 Johannesburg car wash partners configured with services, pricing, hours, and QR attribution.
Transaction Flow	End-to-end booking, payment, partner confirmation, settlement statement, and loyalty accrual demonstrated.
Voucher Engine	R100 voucher auto-issued after 5th qualifying wash, with single-use redemption and 60-day expiry.
Ratings & Trust	Verified-only customer ratings and partner dashboard reporting functional.
AWS Validation	Well-Architected review, cost baseline, budgets, and production-readiness sign-off completed before public launch.

6. AWS Activate Credits Request

Primary ask: AWS Activate credits to offset six months of cloud consumption during MVP build, pilot, and Johannesburg launch preparation.

Credits Component	Amount Requested	Use of Funds
AWS Activate Credits (via Disraptor)	Up to USD 100,000 (subject to Activate Portfolio tier approval)	Offset dev, staging, pilot, monitoring, load testing, backups, security services, and launch buffer across six months.
Minimum viable request	USD 10,000	Core MVP infrastructure if standard Activate Founders tier applies.
Recommended request	USD 25,000 – USD 100,000	Full six-month MVP-to-launch runway via Disraptor as Activate Provider.

Note: AWS Activate credit tiers depend on startup stage and Disraptor's Activate Provider status. Disraptor to confirm the applicable tier and maximum credit amount before submission.

7. Six-Month Credit Allocation Plan

Month	Main AWS Activities	Estimated Credit Use
Month 1	Account setup, IAM, VPC/networking, dev environment, CI/CD pipeline, initial RDS and S3.	\$700
Month 2	Staging environment, partner portal and admin tooling, payment sandbox, logging and monitoring.	\$900
Month 3	Booking/payment core, loyalty/voucher engine, QR attribution, staging traffic testing.	\$1,100
Month 4	Pilot MVP: 20+ partners live, first real bookings, payment and voucher validation.	\$1,500

Month 5	Reviews, subscriptions, partner tiers, analytics, load and security testing.	\$1,600
Month 6	Production hardening, backup/DR validation, Well-Architected remediation, launch traffic.	\$1,700
Total	Six-month cloud consumption credit request.	\$7,500

8. AWS Architecture Overview

The MVP uses managed AWS services throughout, deployed in AWS Africa (Cape Town) af-south-1 from day one, with cost controls, encryption, and monitoring configured before any user traffic.

Layer	AWS Services	Purpose
Compute / API	Amazon ECS on Fargate or AWS App Runner; ALB; ECR	Runs the NestJS API and background workers without managing servers.
Web / Static Assets	Amazon S3 + CloudFront; AWS Amplify Hosting (optional)	Fast, global delivery for partner portal, admin console, and static pages.
Database	Amazon RDS PostgreSQL or Aurora PostgreSQL	Transactional store for bookings, payments, vouchers, loyalty, and settlement.
Identity	Amazon Cognito	Customer, partner, and admin authentication with role separation.
Events / Queues	Amazon SQS + EventBridge	Reliable loyalty accrual, voucher issuance, notifications, and analytics events.
Cache	Amazon ElastiCache (Redis)	Booking availability cache, sessions, and performance.
Storage / Backup	Amazon S3 + AWS Backup	Receipts, partner assets, exports, backups, and lifecycle policies.
Notifications	Amazon SES + SNS	Email, SMS, and push for booking confirmations and voucher alerts.
Security	IAM, KMS, Secrets Manager, WAF, GuardDuty	Least privilege, encryption, web protection, and threat detection.
Observability / DevOps	CloudWatch, CloudTrail, CodePipeline/CodeBuild	Monitoring, audit logs, CI/CD, and Activate proof-of-performance evidence.

9. AWS MRR Forecast

Values are planning estimates for Activate credits sizing. Disruptor to validate in AWS Pricing Calculator before submission.

Stage	Timing	Est. AWS MRR (USD)	Annualised ARR
MVP Build	Months 1–3	\$780	\$9,360
Pilot MVP	Month 4	\$1,500	\$18,000
Johannesburg Launch	Month 6	\$3,240	\$38,880

Gauteng Expansion	Months 9–12	\$7,550	\$90,600
National Scale	Year 2+	\$17,050	\$204,600

FX planning assumption: USD 1 ≈ R18.50. Refresh immediately before submission.

10. Disraptor Responsibilities

Area	Disraptor Responsibility	Output for AWS Activate
Activate Application	Confirm WashRewards eligibility, select correct Activate tier, and submit credits application via Disraptor Activate Provider portal.	Submitted application, approval confirmation, and credit activation details.
Architecture Validation	Review the proposed AWS architecture and recommend managed-service alternatives where appropriate.	Architecture diagram, service list, and Well-Architected review findings.
Cost Governance	Create AWS cost model, budgets, cost allocation tags, environment shutdown rules, and monthly consumption reporting.	AWS Pricing Calculator export, budget screenshots, and MRR forecast.
Security Baseline	Advise on IAM, encryption, secrets management, audit logging, WAF, and POPIA-aligned data residency.	Security baseline checklist and production-readiness actions.
Proof of Performance	Coordinate usage reporting, milestone evidence, and architecture outputs required by AWS Activate.	Usage reports, architecture diagram, and milestone sign-offs.
Post-Launch Optimisation	Support cost optimisation, savings plan analysis, and future AWS growth planning after launch.	Post-launch optimisation plan and expansion MRR forecast.

11. Risk Management

Risk	Control
Activate credits capped below full consumption need	Use credits to offset the highest-cost MVP phases; WashRewards funds any remaining AWS gap directly.
Scope or cost creep	Fixed-scope SOW with milestone acceptance. Any change requires separate approval.
AWS cost overrun	Disraptor configures AWS Budgets, tagged environments, right-sized resources, and scheduled shutdown of non-production services.
Payment / security risk	PCI-compliant payment gateway handles card data; platform stores tokens only. Audit logs and immutable transaction records required.
Voucher fraud	Only completed, paid, app-booked, and partner-confirmed washes qualify. Single-use redemption with 60-day expiry.
Low partner adoption	Direct Johannesburg recruitment, QR poster conversion, founding partner incentives, and partner analytics dashboard.

Data protection / POPIA	AWS Africa (Cape Town) for production data, encryption at rest and in transit, consent capture, and role-based access controls.
-------------------------	---

12. AWS Activate Submission Inputs for Disraptor

Field	Proposed Response
Startup / Customer	Convenient Living Solutions, trading as WashRewards SA
AWS Activate Provider	Disraptor
Build Partner	Sethala — application development partner
Workload Name	WashRewards SA Vehicle Wash Marketplace Platform
Industry	Consumer marketplace / mobility services / SME digitisation / fintech-enabled services
Target AWS Region	Africa (Cape Town) — af-south-1
Funding Motion	AWS Activate Portfolio credits via Disraptor as Activate Provider
Problem Statement	Upfront development and early AWS consumption costs are delaying a production AWS workload with clear market demand and measurable recurring AWS revenue.
MVP Outcome	Working MVP by Month 4; public Johannesburg launch readiness by Month 6.
Key AWS Services	ECS/Fargate, RDS/Aurora PostgreSQL, S3, CloudFront, Cognito, SQS, EventBridge, ElastiCache, SES, SNS, CloudWatch, WAF, GuardDuty, KMS, Secrets Manager, CodePipeline, AWS Backup
Credits Request	Up to USD 100,000 via Activate Portfolio (minimum USD 10,000 via Activate Founders)
Expected AWS MRR	USD 780 build → USD 1,500 pilot → USD 3,240 Johannesburg launch → USD 7,550 Gauteng → USD 17,050 national
Customer Commitment	WashRewards commits to launching the MVP on AWS, owning the AWS account, recruiting pilot partners, and proceeding to production if success criteria are met.

13. Immediate Next Steps

#	Action	Owner
1	Share this pack with Disraptor together with the Sethala SOW, WashRewards business plan, and development quote.	WashRewards SA
2	Disraptor confirms AWS Activate tier eligibility, maximum credit amount, and any supporting documentation required.	Disraptor
3	Disraptor produces or validates an AWS architecture diagram and Pricing Calculator estimate for Months 1–6.	Disraptor
4	Confirm identity provider (Cognito vs Keycloak on ECS) and compute model (ECS/Fargate vs App Runner).	Disraptor + Sethala

5	Confirm AWS account ownership model, billing setup, cost allocation tags, budgets, and environment structure.	Disraptor + WashRewards
6	Disraptor submits the AWS Activate application and confirms credit activation before any credit-dependent work begins.	Disraptor

14. Sources & Assumptions

Source / Assumption	Details
Sethala SOW	WashRewards-Sethala Proposal & SOW supplied by WashRewards SA. Used for scope, quote, timeline, and AWS deployment assumptions.
Disraptor partner role	Disraptor confirmed as AWS Activate Provider and AWS partner.
AWS Activate	https://aws.amazon.com/activate/
AWS Activate Providers	https://aws.amazon.com/activate/activate-providers/
AWS Pricing Calculator	https://aws.amazon.com/aws-cost-management/aws-pricing-calculator/
AWS Africa (Cape Town)	https://aws.amazon.com/blogs/aws/now-open-aws-africa-cape-town-region/
FX assumption	USD/ZAR planning rate of approximately R18.50. Refresh immediately before submission.

Important: This is a funding request draft. AWS Activate eligibility, credit tier, maximum amount, and claim process must be confirmed by Disraptor before any work begins. This document does not constitute a commitment from AWS or Disraptor.
